Screening of babies in Indiana for hearing loss is mandated by PL91-1999

16-41-17-10 states that ISDH is responsible for
“A centralized program that provides tracking, follow-up, diagnosis, management, and family counseling and support.”

Individuals with Birth Defects & Problems Registry
Indiana

Code 16-38-4, Rule 410 IAC 21-3-7

January 2004 required physician report
October 2006 required audiologist report
Utah Legislation

- Newborn Hearing Screening mandated in 1998
  (Utah Code Section 26-10-6)

- Newborn Hearing Screening Rules (Ut Admin Code R398-2)
  - Each facility responsible for program
  - Audiologist oversees facility screening program
    - Screened prior to discharge
  - Includes home births
    - Screened by one month
  - Reporting
    - Parents, PCP, Dept of Health
    - “…reasonable efforts within 30 days…”
Rhode Island Legislation

RI General Law (23-13-13) states:

- Screening of RI babies for hearing loss is mandated unless parental refusal due to conflict with religious tenets/practices
- Physician attending a newborn child is responsible
- DOH authorized to establish rules and regulations for fee to cover program costs
- Screening shall be a covered benefit reimbursable by health insurers
- Creation of advisory committee

Reporting not required
Indiana LTF/LTD

Loss to follow-up is calculated using the group of referred babies

- Referred babies include:
  - Babies who do not pass UNHS
  - Babies who pass with risk factors
- Families are reported to Dept of Health, in addition to Part C and PCP
- Reporting occurs through:
  - Audiology reporting system (DAE)
  - Parent report via return letter or phone call
  - Part C Early Intervention
  - IBDPR
- If no report received:
  - Phone calls from Dept of Health
  - Letter Campaign
  - Regional Consultants
- Attempts to contact unscreened babies occur 2 years post birth
  - Phone calls
  - Letter Campaign
Utah LTF/LTD

- Tracking by birthing facility / midwives
  - Babies who do not pass UNHS
  - Births with no reported screening results
  - Includes refused / home births (>750 in ’07)

- Support by State EHDI Loss to follow-up is calculated for all occurrent (live) births

- Initial office
  - Supplement facility tracking by request
  - Transfers, rural births, home births
  - Track documented dx referrals
  - Collaboration with Vital Records

- If no dx report received
  - Contact supervising audiologist and referral audiologist
  - Contact to parent and physician (if known)
  - Monitor EI / PIP enrollment
Rhode Island LTF

Loss to follow-up is calculated using the group of infants who failed or had incomplete/invalid screening results and did not complete recommended follow-up:

- Recommended follow-up includes rescreen and/or diagnostic testing
- Additional follow-up (not included in LTF rate) is done for infants who:
  - Were not screened
  - Passed but had risk factors
- Reporting process:
  - Paper based reporting form for audiologists, web reporting will be available soon
  - If no report received infant remains in the system as needing follow-up
- Attempts to contact for follow-up occur up to 30 months
Indiana Innovations

- EHDI Alert Response System
- Reciprocal Release
- Parent Consultant (follow-up)
- Regional Consultants
- Referral to Family Support Organizations
Utah Innovations

- Loss to Follow-up Projects
  - NCHAM, RTI
- CHARM Data Integration
- PIP screening follow-up collaboration
- Birth Certificate Alert
- Home birth screening project
Rhode Island Innovations

- Alert system reminder letters to parent and physician at 6, 18 and 30 months
- Engage medical home, provider algorithm
- Family guides for follow-up (4 versions)
- Follow-up committee and quarterly checks with EI to ensure connection to services for babies with confirmed hearing loss
- Use of home visiting services
- Diagnostic done prior to discharge for NICU infants if indicated
