☒ Denoes comprehensive testing equipment and services available for testing infants and toddlers.

0

This list was developed as a result of the Audiologists' responses to a survey sent by Idaho Sound Beginnings, which was designed to determine the level of hearing care that each Audiologist is able and willing to provide to pediatric populations. Audiol

Comprehensive Audiological Services: *Can test all ages - Can perform full range of pediatric diagnostic audiology - Can select and fit appropriate amplification for all*

Limited Audiological Services: *May not have facilities to test all ages - Does not perform the full range of diagnostic audiology- (may not have OAE's or ABR's)*

GUIDE TO PEDIATRIC AUDIOLOGY SERVICES

* Child and family history,

* A frequency-specific assessment of the Auditory Brainstem Response [ABR] using **air-conducted tone burst** and bone-conducted tone burst when indicated. When permanent hearing loss is detected, frequency-specific ABR is needed to determine the degree and

Pediatric Audiologists

EARLY HEARING DETECTION INTERVENTION (EHDI)

- * Click-evoked ABR using both condensation and rarefaction single-polarity stimulus, if there are risk indicators for neural hearing loss (auditory neuropathy) such as Hyperbilirubinemia or anoxia, to determine whether a cochlear microphonic is present
- * Distortion product or transient evoked otoacoustic emissions [OAE].
- * **Tympanometry** using a 1000-Hz probe tone.
- * Clinician observation of the infant's auditory behavior as a cross-check, in conjunction with electrophysiologic measures. Behavioral observation alone is not adequate for determining whether hearing loss is present in this age group, nor is it adequate
