

## **Part C Intervention Services for Infants and Toddlers (Birth to Age 3) with Sensory Loss: Recommended Collaboration Practices (July 2022)**

The purpose of this resource is to provide information on recommended collaborative practices when providing early intervention services for infants and toddlers with sensory loss, including those who are Blind/Visually Impaired, Deaf/Hard of Hearing, or DeafBlind. For information on diagnosed physical or mental conditions with a high probability of resulting in developmental delay, including conditions related to sensory loss in infants and toddlers, [refer to the Help Me Grow Minnesota webpage Diagnosed Conditions Affecting Development](#).

Early intervention is critical for a child with a sensory loss. Hearing and/or vision loss results in compromised or missing access to people, communication, and the child's environment, which can significantly impact the child's early learning and brain development, as well as access to and interaction with others. Collaboration among service providers and with the child's family is essential in building the family's capacity to provide experiences that will support the child's overall learning and development.

For infants and toddlers who are receiving an initial evaluation for Part C eligibility, evaluation teams must address the child's physical development, including both vision and hearing. If a local education agency or an early intervention service provider receives documentation that a child has been diagnosed with sensory loss, or a medical condition that has a high probability of resulting in a sensory loss, it is recommended that the team consult with the appropriate low-incidence provider(s), such as the teacher of the blind/visually impaired (TBVI) and/or the teacher of the deaf/hard of hearing (TDHH). The team, including the parent(s)/caregiver(s), early intervention specialists, appropriate low-incidence teachers and related service providers (e.g., educational audiologists, speech language pathologists, and/or certified orientation and mobility specialists), will determine next steps in addressing the individual potential impacts of the child's sensory loss on their overall development.

Teachers of the blind/visually impaired and teachers of deaf/hard of hearing are able to:

- Share information about the medical diagnoses, etiology and prognosis of both hearing and vision loss.
- Support the family and team with information and resources specific to the impact of hearing and/or vision loss on the child's access and development.
- Coach families on how they can support their child's individual sensory needs and learning.
- Provide appropriate adaptations for home and learning environments specific to hearing and vision challenges.
- Recommend emergent literacy strategies and accommodations that are specific to hearing and/or vision loss with the child's family and team.

It is recommended that teams serving families of children with both hearing and vision loss (DeafBlind) connect with the Minnesota DeafBlind Project to receive specific materials and resources to support their unique needs. For questions regarding resources and materials for combined hearing and vision loss (DeafBlind), please contact the Statewide DeafBlind Specialist, [Ann Mayes](mailto:ann.mayes@metroecsu.org) at [ann.mayes@metroecsu.org](mailto:ann.mayes@metroecsu.org).

For questions about this document or the recommended practices above, please [contact the MDE Early Childhood Special Education \(ECSE\) mailbox](mailto:mde.ecse@state.mn.us) at [mde.ecse@state.mn.us](mailto:mde.ecse@state.mn.us).
